

# GEMINI ENTERPRISE

The ultimate Enterprise AI Platform to empower your business, your data.

## YOUR BUSINESS, YOUR DATA IS NOW AI-POWERED

Gemini Enterprise creates a contextual layer atop your mission-critical business data, offering a **simple, secure, and trustworthy** generative AI experience to **accelerate enterprise rapid decision making**.

### PROBLEMS

#### Enterprise data is Not AI-consumable

Enterprise data such as CRM, ERP, supply chain, online store transactions, IT operations, and cybersecurity lack the semantic structure required for AI to intuitively understand and link data relationships.

#### AI Hallucinates

Large-language Models (LLMs) are trained based on public knowledge but not enterprise knowledge. That is why, by nature, AI frequently generates inaccurate outputs or 'hallucinations' when it comes to answering mission-critical business questions.

#### Training AI is Expensive

While training your own LLM is possible, it requires extensive GPU computing resources and specialized talents to do the job, which is not affordable by every organization.

### SOLUTION

Gemini Enterprise transforms your enterprise data into AI-consumable knowledge, reducing hallucinations and ensuring greater accuracy, all while maintaining robust privacy and security controls.

We empower you to validate and explain AI-generated answers, supporting rapid and informed decision-making. With Gemini Enterprise, you can confidently ask mission-critical business questions and receive accurate, explainable reports and insights.

### KEY FEATURES

Gemini Enterprise is a modern Enterprise AI platform that helps organizations start their generative AI journey in hours or days instead of weeks or months. A cloud-native, no-code, wizard-driven platform ensures your data and analytics projects to be powered by generative AI in minutes or hours instead of weeks or months.

#### Connect Your Data to AI Fast

Gemini Enterprise Data Importer makes it simple to setup, connect, and manage various data sources with built-in connectors and a user friendly, guided interface.

#### No-Code

No specialized IT or query language skills required. Easily import disparate data and create a semantic layer of understanding on top of your enterprise data.

#### Conversational AI Experience Made Easy

Our enterprise AI assistant lets you ask questions through natural, conversational queries and receive comprehensive answers in text, tables, or visual charts.

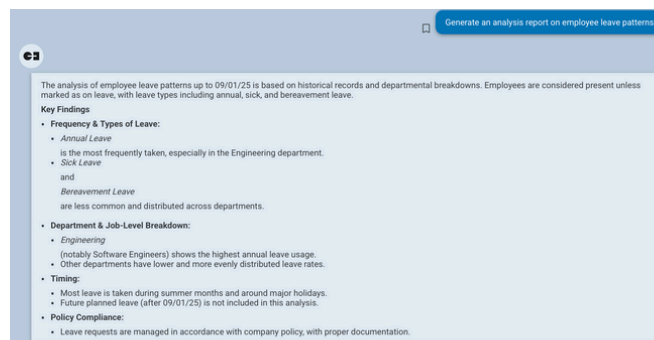

## AI Generated Insights

Transform your data into analytical knowledge for rapid decision-making. For example, you can ask your AI assistant to:

- Generate a comprehensive retail sales report that analyzes regional performance, identifies top-selling products, and tracks individual sales team achievements based on day-to-day transactional data.
- Generate a financial health report that summarizes key performance indicators such as profit margins, revenue trends, and expense breakdowns based on your organization's financial data.
- Generate a cybersecurity incident report that points out the source of the attack, the victims, and the impact as well as provide remediation recommendations.

*All at your fingertips.*

## Projects with Access Controls

Organizations can create multiple data projects, each connected to specific data sources and mapped to a tailored semantic knowledge model, accessible by authorized users or user groups, enhancing collaboration while minimizing the risk of data leaks.

## BENEFITS

### Modern Enterprise AI Assistant Platform Built for the Future

Gemini Enterprise is engineered to democratize data by **enabling technical and business users alike to take full advantage of generative AI** without the need to understand the underlying algorithms or query languages.

### About Gemini Data

Our mission is to redefine how data is used, analyzed, and shared. We've built the world's simplest enterprise AI assistant platform to help companies all over the world connect the dots and get answers faster, respond to unusual events, and take the next best action.
